- DUCTLESS MINI SPLITS
- GEOTHERMAL

## OUR EQUIPMENT

Capital uses the industry's most powerful duct cleaning equipment. Our technicians operate a truck mounted vacuum system with 12,000 cfms of suction, along with specialized brushes and pneumatic agitation to remove buildup inside the duct work. A 10" diameter vacuum hose carries the contaminants up to 200 ft. away from the home to ensure contaminants are not leaked back into the home and to prevent cross-contamination from previous cleanings.

# AIR DUCT CLEANING PROCESS

1. A specialist explains the cleaning process & answers questions.

2. Uniformed technicians arrive with a powerful vacuum truck.

3. Technicians present their identifications and greet you.

4. Protective drop cloths & shoe covers are used inside your home.

5. Registers are covered to trap dirt & increase vacuum pressure.

6. Access openings are created for our various cleaning tools

7. Vacuum & various brushes are used to clean inside ductwork.

8. We clean the furnace blower; the heart of your forced air system.

9. We clean the evaporator coil as required by NADCA.

10. Before/After pictures are taken to verify high quality cleaning results.

11. Technician seals access openings & uncovers registers

12. Work areas are cleaned up & your 100% satisfaction is verified

YOUR INDOOR AIR QUALITY MATTERS JUST AS MUCH AS ANY OTHER PART OF YOUR HOME.

## OUR PROMISE

As one of the largest and highest rated residential contractors in Wisconsin our relationship with you ensures you always receive the best service and highest-quality work.

## WE ALWAYS GUARANTEE:

Cleaning your ducts with high powered trucks—not glorified shop vacs!

Maximum comfort and safety in your home.

A \$100 same-day service promise.

## FREQUENTLY ASKED QUESTIONS

### Q: When should I have my ducts cleaned?

A: After a renovation, before buying or selling a home, before an HVAC installation, and if odors and/or allergies are a concern. Homes with pets, high traffic, or environmental concerns should have vents cleaned every 3 - 7 years.

### Q: What kind of equipment is best?

A: Truck or trailer mounted equipment. Our truck mounted equipment uses 12,000 cfms (6 times more suction power than a portable system, and 12 times a household vacuum!)

### Q: How much should duct cleaning cost?

A: The U.S. Environmental Protection Agency says duct cleaning costs vary depending on the size of the HVAC system, system accessibility, level of contamination, and type of duct material. The EPA also cautions to beware of companies that charge a nominal fee and do a poor job of cleaning the heating and cooling system.

### Q: What does NADCA certified mean?

A: Companies certified by the National Air Duct Cleaning Association follow ACR (the NADCA standard for cleaning,) and have signed a code of ethics stating they will do everything possible to protect the consumer.

DUCT CLEANINGS HELP YOUR HOME BECAUSE THEY GET RID OF ODORS, DUST, AND ALLERGENS HIDING IN YOUR DUCTWORK. THEY ALSO IMPROVE YOUR INDOOR AIR QUALITY AND YOUR HOME'S OVERALL EFFICIENCY. IF YOU'RE READY TO INVEST IN DUCT CLEANING SERVICES, WE'RE READY TO HELP YOU WITH THIS PROCESS.
